

To whom it may concern

It's my pleasure to highly recommend Mr. Oluwawairefunmi Olawolu for your graduate program. I was Olawolu's course advisor and student's work experience program coordinator during his recently concluded undergraduate program. During his undergraduate final years, Olawolu also enrolled in my elective course, Water Resources Engineering where he got an A. He was on the Dean's list several times. He is smart, challenging, and consistently tries to improve his weakness.

In his courses, he maintains to be among the top of the class. He did not at any point retake a course, he had a good standing academically in his 5 years degree program. He won the prestigious Agbami Medical and Engineering Professionals Award in 2016. He also showed a lot of potentials in research work while in the geotechnical section of the department. He was in the waste management research group of the civil engineering department of the Federal University of Technology Akure in his final year where he worked on the use of a local clay as a landfill liner. His contribution to the group earned him an A in his report. During his student industrial work experience scheme (SIWES) which he had in Dantata and Sawoe Construction Company, his industrial supervisors were impressed with his work as a civil engineer intern. He was scored a 90/100 in his SIWES report. He was a team player, goal-getter, and hardworking student. He has excellent communication skills. His presentations, oral and written, are outstanding.

Olawolu's passion for solutions to the failure of infrastructure in Nigeria is enviable. In his "Engineering in Society" course, his technical report was on the investigation of drainage problems on the school campus. He was awarded the highest grade in his presentation for such thoughtful work. I strongly believe he is destined for greatness in the civil engineering profession and a graduate program in civil engineering would help in sharpening his problem-solving skill at this stage in his career.

With my knowledge of Olawolu, I would highly recommend him for your master's degree program in civil engineering and also for funding opportunities in your university.
